

FRONT END – PART 2

CONSTRUCTORS AND PROTOTYPES

`(printDetails())`

Follow the steps given below to produce the desired result.

1. Fix the code below by deleting the `printDetails()` function from the Student object and adding it to the Student prototype object.
2. Then create 4 new instances of the Student object by setting the id, name, club values to (1, “Raj”, “Cricket”), (2, “Rohan”, “Dance”), (3, “Rita”, “Basketball”) and (4, “Reema”, “Music”).
3. Now create an array of these 4 objects.
4. Run a loop on the array you created and call each object's `printDetails()` function.

Expected Output:

```
1 'Raj' 'Cricket'  
2 'Rohan' 'Dance'  
3 'Rita' 'Basketball'  
4 'Reema' 'Music'
```
