

FRONT END – PART 2

STARTING WITH JAVASCRIPT

(Swap the value)

Write a program to swap the value of two variables.

```
var a = "5";  
var b = "10";
```

So variable a holds the value "10", and variable b holds "5".

Constraints:

Don't change the existing code.
You shouldn't redeclare the variables a and b.

Expected Output:

```
a is 10  
b is 5
```
